ABOUT ME

Quantitative analyst with three years of experience building systematic fixed income trading applications. I am interested in building statistical models and writing robust, high-performance code.

PROFFESIONAL EXPERIENCE

Deutsche Bank

Quantitative Strategist

- Working exlusively on the global (US & EMEA) automated credit business
- My work consists of building and improving the statistical modelling framework used by the alpha models (Python & Java)
 - Researching and implementing a real-time "macro alpha" model
 - Evaluating new data sources (Fund Flows, SOLVE, etc)
- Built the initial version of the ETF Create/Redeem tool
- Ad-hoc analytics for the desk
- Maintaining programming standards through in-depth code reviews

Quantitative Strategist

2022 - 2023

- Developing a quantitative analytics library (Python) used by all desks in the wider Quantitative Fixed Income (QFI) automated trading business

Virtu Financial

London, UK

Intern

2021

- Analysing trades executed in dark venues (Python)

EDUCATION

University College London

London, UK

MSc: *Physics*, Distinction

2020 - 2021

Wesleyan University

Connecticut, USA

BA: *Mathematics & Physics*, Dean's List: 2019 & 2020

2016 - 2020

RELEVANT PROJECTS

Personal Projects

joeclayton13.github.io

- Current: The Abelian Sandpile (Java)

MSc Physics Research Thesis

2021

Markov State Models: Variational Coarse-Graining and the Kemeny Constant

- Proposed a novel expression providing the optimal clustering for any arbitrary system
- Numerical validation using MATLAB
- My work contributed to [\[1\]](#)

PROGRAMMING Python, Java, KDB+, C++
